User: Customer

Must have:

- As a customer, I want to browse the restaurant menu, so that I can see available dishes and their prices.
- As a customer, I want to order food, so that I can have meals delivered to my chosen location.
- As a customer, I want to make a table reservation online, so that I can secure a table at preferred time.

Should have:

- As a customer, I want to create an account, so that I can manage my reservations and orders.
- As a customer, I want to track my order status, so that I know when my food will be delivered.

User: Customer

Could have:

- As a customer, I want to view my previous orders, so that I can easily reorder my favorite meals.

Won't have:

- As a customer, I want to rate dishes and deliveries, so that I can share my experience with the restaurant.

User: Customer

Priority	User Story	Acceptability criteria
Must	As a customer, I want to browse the restaurant menu, so that I can see available dishes and their prices.	Application menu shows dish name and price for available items. Unavailable items are not shown.
Must	As a customer, I want to order food, so that I can have meals delivered to my chosen location.	Orders can be submitted with delivery address and contact information. System validates payment and sends confirmation.

User: Customer

Priority	User Story	Acceptability criteria
Must	As a customer, I want to make a table reservation online, so that I can secure a table at preferred time.	User submits contact information and system validates if reservation is available. On success, sends confirmation.
Should	As a customer, I want to create an account, so that I can manage my reservations and orders.	Registration saves account information and creates unique identifier. Credentials stored hashed.

User: Customer

Priority	User Story	Acceptability criteria
Should	As a customer, I want to track my order status, so that I know when my food will be delivered.	Application shows order contents along with estimated delivery time.
Could	As a customer, I want to view my previous orders, so that I can easily reorder my favorite meals.	History is available only to users with an account. Displays order contents, price and date of order.
Won't	As a customer, I want to rate dishes and deliveries, so that I can share my experience with the restaurant.	Out of scope for the application.

User: Restaurant manager

Must have:

- As a restaurant manager, I want to view all upcoming reservations, so that I can manage table availability.
- As a restaurant manager, I want to assign delivery orders to available drivers, so that deliveries can be completed efficiently.
- As a restaurant manager, I want different user roles to have different access permissions, so that sensitive business information remains protected.

User: Restaurant manager

Should have:

- As a restaurant manager, I want to view order statistics, so that I can identify the most popular dishes.
- As a restaurant manager, I want the system to prevent double bookings, so that the same table cannot be reserved by multiple customers at the same time.
- As a restaurant manager, I want to update menu items and prices, so that customers always see the current restaurant offer.

User: Restaurant manager

Could have:

- As a restaurant manager, I want to analyze reservation trends, so that I can better prepare for busy periods.

Won't have:

- As a restaurant manager, I want to predict future sales using historical data, so that I can optimize inventory and staffing.

User: Restaurant manager

Priority	User Story	Acceptability criteria
Must	As a restaurant manager, I want to view all upcoming reservations, so that I can manage table availability.	Application shows all booked reservations in a list with time and date visible.
Must	As a restaurant manager, I want to assign delivery orders to available drivers, so that deliveries can be completed efficiently.	When assigning a delivery, application shows each available driver along with number of already planned deliveries for them.

User: Restaurant manager

Priority	User Story	Acceptability criteria
Must	As a restaurant manager, I want different user roles to have different access permissions, so that sensitive business information remains protected.	When an employee is assigned a role, they are unable to view information tagged for other roles
Should	As a restaurant manager, I want to view order statistics, so that I can identify the most popular dishes.	Application allows a privileged user to view sales of food items ordered by number of sales along with their count.

User: Restaurant manager

Priority	User Story	Acceptability criteria
Should	As a restaurant manager, I want the system to prevent double bookings, so that the same table cannot be reserved by multiple customers at the same time.	When two users try to book the same table at the same time up to the minute, only one of them is successfully processed by the system.
Should	As a restaurant manager, I want to update menu items and prices, so that customers always see the current restaurant offer.	Application allows a privileged user to modify live prices of menu items and add or remove items on offer.

User: Restaurant manager

Priority	User Story	Acceptability criteria
Could	As a restaurant manager, I want to analyze reservation trends, so that I can better prepare for busy periods.	Given a table is regularily reserved, application warns a privileged user which tables are highly contested.
Won't	As a restaurant manager, I want to predict future sales using historical data, so that I can optimize inventory and staffing.	Won't be implemented.

User: Delivery driver

Must have:

- As a delivery driver, I want to view my assigned deliveries, so that I know which orders I need to deliver and where.

Should have:

- As a delivery driver, I want to mark an order as delivered, so that the system can update its status automatically.

Could have:

- As a delivery driver, I want to view the estimated delivery route, so that I can plan my journey and deliver orders efficiently.

Won't have:

- As a delivery driver, I want to communicate with customers through the application, so that I can inform them about delivery delays or special circumstances.

User: Delivery driver

Priority	User Story	Acceptability criteria
Must	As a delivery driver, I want to view my assigned deliveries, so that I know which orders I need to deliver and where.	Application shows list of deliveries currently assigned to the driver.
Should	As a delivery driver, I want to mark an order as delivered, so that the system can update its status automatically.	Application allows the marking a delivery as completed, removing it from the list of active deliveries.

User: Delivery driver

Priority	User Story	Acceptability criteria
Could	As a delivery driver, I want to view the estimated delivery route, so that I can plan my journey and deliver orders efficiently.	Application displays the delivery address and a suggested route for each assigned delivery.
Won't	As a delivery driver, I want to communicate with customers through the application, so that I can inform them about delivery delays or special circumstances.	Out of scope for the application.

User: Restaurant owner

Must have:

- As a restaurant owner, I want to view financial reports, so that I can monitor the restaurant's revenue and financial performance.

Should have:

- As a restaurant owner, I want to compare financial performance across different months, so that I can identify changes in revenue and costs.

User: Restaurant owner

Could have:

- As a restaurant owner, I want to export financial reports, so that I can use the data for accounting and record keeping.

Won't have:

- As a restaurant owner, I want to receive automatic notifications when the restaurant receives a new order, so that I can stay informed about daily operations without checking the application.

User: Restaurant owner

Priority	User Story	Acceptability criteria
Must	As a restaurant owner, I want to view financial reports, so that I can monitor the restaurant's revenue and financial performance.	Application shows breakdown of financial earnings and costs categorized for a given month.
Should	As a restaurant owner, I want to compare financial performance across different months, so that I can identify changes in revenue and costs.	Application allows the owner to select two or more months and compare their total revenue and costs.

User: Restaurant owner

Priority	User Story	Acceptability criteria
Could	As a restaurant owner, I want to export financial reports, so that I can use the data for accounting and record keeping.	Application allows the owner to download a financial report in CSV or PDF format for a selected month.
Won't	As a restaurant owner, I want to receive automatic notifications when the restaurant receives a new order, so that I can stay informed about daily operations without checking the application.	Out of scope for the application.
