Restaurant Management Software

- The purpose of the application is to provide an integrated platform that supports needs of customers, employees, management and owners of the restaurant.
- Customers will be able to use a web application to make reservations at the restaurant as well as place orders with delivery to a chosen location.
- Owners and management will use a separate application to track financial performance, analyse orders and reservation trends as well as manage employee schedules and assign delivery drivers.
- Employees using the application will be able to see delivery routes assigned to them and details of each order.
- A centralized backend will be responsible for organizing and processing the information and coordinating communication between different users and applications.
