Browse Restaurant Menu

Role: Customer
Priority: Must Have
User Story: As a customer, I want to browse the restaurant menu, so that I can see available dishes and their prices.
Functional Acceptance Criteria

- Can the customer view the restaurant menu without placing an order?
- Does the menu display the name and price of each available dish?
- Are unavailable dishes excluded from the displayed menu?
- Does the system display updated prices after the restaurant manager modifies them?
- Does the system display an appropriate message when no dishes are available?

Browse Restaurant Menu

Non-Functional Requirements

- **Performance:** The menu should load within 2 seconds for at least 95% of requests under normal operating conditions.
- **Usability:** Dish names and prices must be clearly readable on desktop and mobile devices.
- **Reliability:** The application must not display incomplete menu data when retrieval fails.

Notes and Edge Cases

- The restaurant menu is empty.
- A dish becomes unavailable while the customer is browsing.
- The restaurant manager updates a dish price.
- The menu service is temporarily unavailable.

Order Food

Role: Customer

Priority: Must Have

User Story: As a customer, I want to order food, so that I can have meals delivered to my chosen location.

Functional Acceptance Criteria

- Can the customer select available dishes and specify their quantities?
- Can the customer provide a delivery address and contact information?
- Does the system validate required order information before processing payment?
- Does the system validate the payment before confirming the order?
- Does the customer receive an order confirmation after successful payment?
- Does the system prevent confirmation when payment fails or the selected items are unavailable?

Order Food

Non-Functional Requirements

- **Security:** Payment information must be transmitted over an encrypted HTTPS connection.
- **Performance:** Order validation should complete within 2 seconds for at least 95% of requests, excluding external payment processing.
- **Reliability:** A successfully paid order must not be created more than once if the customer repeats a request.
- **Privacy:** Customer contact information and delivery addresses must only be accessible to authorized users and services.

Notes and Edge Cases

- The customer submits an empty order.
- The delivery address or contact information is incomplete.
- A selected dish becomes unavailable before payment.
- Payment is declined or the payment service times out.
- The customer submits the same order request multiple times.

Make a Table Reservation

Role: Customer
Priority: Must Have
User Story: As a customer, I want to make a table reservation online, so that I can secure a table at preferred time.
Functional Acceptance Criteria

- Can the customer select a reservation date, time and amount of people?
- Can the customer provide the required contact information?
- Does the system verify table availability before confirming the reservation?
- Does the system prevent overlapping reservations for the same table?
- Does the customer receive confirmation after a successful reservation?
- Does the system inform the customer when the requested reservation cannot be completed?

Make a Table Reservation

Non-Functional Requirements

- **Performance:** Availability checks should complete within 2 seconds for at least 95% of requests under normal operating conditions.
- **Reliability:** Simultaneous reservation requests must not result in overlapping confirmed bookings for the same table.
- **Security:** Customer contact information must be protected against unauthorized access.
- **Usability:** Customers should be able to complete a reservation without creating an account.

Notes and Edge Cases

- No suitable table is available for the selected date and time.
- Two customers attempt to reserve the same table simultaneously.
- The customer enters invalid or incomplete contact information.
- The selected reservation time is in the past.
- The confirmation notification cannot be delivered.

View Upcoming Reservations

Role: Restaurant Manager
Priority: Must Have
User Story: As a restaurant manager, I want to view all upcoming reservations, so that I can manage table availability.
Functional Acceptance Criteria

- Can the restaurant manager view a list of upcoming reservations?
- Does each reservation display its date and time?
- Does the system display only reservations that have not yet reached their scheduled time?
- Can the manager identify the reserved table for each reservation?
- Does the system display an appropriate message when no upcoming reservations exist?
- Are users without the required permissions prevented from accessing reservation information?

View Upcoming Reservations

Non-Functional Requirements

- **Performance:** The reservation list should load within 2 seconds for at least 95% of requests containing up to 500 reservations.
- **Security:** Only authorized restaurant personnel may access reservation data.
- **Reliability:** Confirmed reservations must remain available after a system restart.
- **Usability:** Reservations should be displayed in chronological order.

Notes and Edge Cases

- There are no upcoming reservations.
- Multiple reservations exist for the same time.
- A reservation is cancelled while the manager is viewing the list.
- The reservation database is temporarily unavailable.

Assign Delivery Orders to Drivers

Role: Restaurant Manager

Priority: Must Have

User Story: As a restaurant manager, I want to assign delivery orders to available drivers, so that deliveries can be completed efficiently.

Functional Acceptance Criteria

- Can the restaurant manager view delivery orders awaiting driver assignment?
- Does the system display a list of available delivery drivers?
- Does the system display the number of planned deliveries assigned to each available driver?
- Can the restaurant manager assign an unassigned delivery order to an available driver?
- Does the assigned delivery appear in the selected driver's delivery list?
- Does the system prevent conflicting assignments of the same delivery order?

Assign Delivery Orders to Drivers

Non-Functional Requirements

- **Performance:** Driver availability and workload information should load within 2 seconds for at least 95% of requests under normal operating conditions.
- **Reliability:** A delivery order must not be assigned to multiple drivers simultaneously.
- **Security:** Only authorized restaurant managers may assign delivery orders to drivers.
- **Consistency:** Driver assignment changes must be reflected in the driver's delivery list after the assignment is saved.

Notes and Edge Cases

- No delivery drivers are currently available.
- A driver becomes unavailable before the assignment is confirmed.
- Two managers attempt to assign the same delivery simultaneously.
- The selected order has already been assigned.
- The assignment operation fails due to a server error.

Manage User Access Permissions

Role: Restaurant Manager

Priority: Must Have

User Story: As a restaurant manager, I want different user roles to have different access permissions, so that sensitive business information remains protected.

Functional Acceptance Criteria

- Does the system assign an appropriate role to each employee account?
- Does the system restrict access to information based on the employee's assigned role?
- Are employees prevented from accessing information reserved for other roles?
- Does the system reject unauthorized requests to restricted operations?
- Can an authorized administrator modify an employee's assigned role?
- Are updated permissions applied to subsequent access requests?

Manage User Access Permissions

Non-Functional Requirements

- **Security:** Access permissions must be enforced by the backend, independently of the user interface.
- **Security:** Unauthorized requests must not expose sensitive information in error responses.
- **Performance:** Role-based authorization checks should add no more than 100 milliseconds to request processing for at least 95% of requests under normal operating conditions.
- **Auditability:** Changes to employee roles should be recorded with the user responsible and the time of modification.

Notes and Edge Cases

- An employee attempts to access information belonging to another role.
- An employee's role changes during an active session.
- An unauthenticated user requests restricted information.
- An employee account has no valid role assigned.
- An unauthorized employee attempts to modify another user's permissions.

View Assigned Deliveries

Role: Delivery Driver
Priority: Must Have
User Story: As a delivery driver, I want to view my assigned deliveries, so that I know which orders I need to deliver and where.
Functional Acceptance Criteria

- Can the delivery driver view a list of deliveries currently assigned to them?
- Does each assigned delivery display its delivery address?
- Can the driver identify which order corresponds to each delivery?
- Does the system prevent a driver from viewing deliveries assigned to other drivers?
- Does the delivery list reflect newly assigned orders after its data is refreshed?
- Does the system display an appropriate message when no deliveries are assigned?

View Assigned Deliveries

Non-Functional Requirements

- **Performance:** The assigned deliveries list should load within 2 seconds for at least 95% of requests under normal operating conditions.
- **Security:** Drivers must only access delivery information for orders currently assigned to them.
- **Usability:** The delivery list must remain readable and usable on mobile devices.
- **Reliability:** Successfully saved assignments must remain available after the driver signs out and signs in again.

Notes and Edge Cases

- No deliveries are assigned to the driver.
- A new delivery is assigned while the driver is viewing the list.
- A delivery is reassigned to another driver.
- The driver temporarily loses network connectivity.
- The driver attempts to access another driver's delivery details.

View Financial Reports

Role: Restaurant Owner

Priority: Must Have

User Story: As a restaurant owner, I want to view financial reports, so that I can monitor the restaurant's revenue and financial performance.

Functional Acceptance Criteria

- Can the restaurant owner select a month for which to view financial information?
- Does the system display total revenue for the selected month?
- Does the system display costs grouped into appropriate categories?
- Does the system provide a breakdown of financial earnings and costs for the selected month?
- Does the system display an appropriate message when financial data is unavailable for the selected month?
- Does the system prevent unauthorized users from accessing financial reports?

View Financial Reports

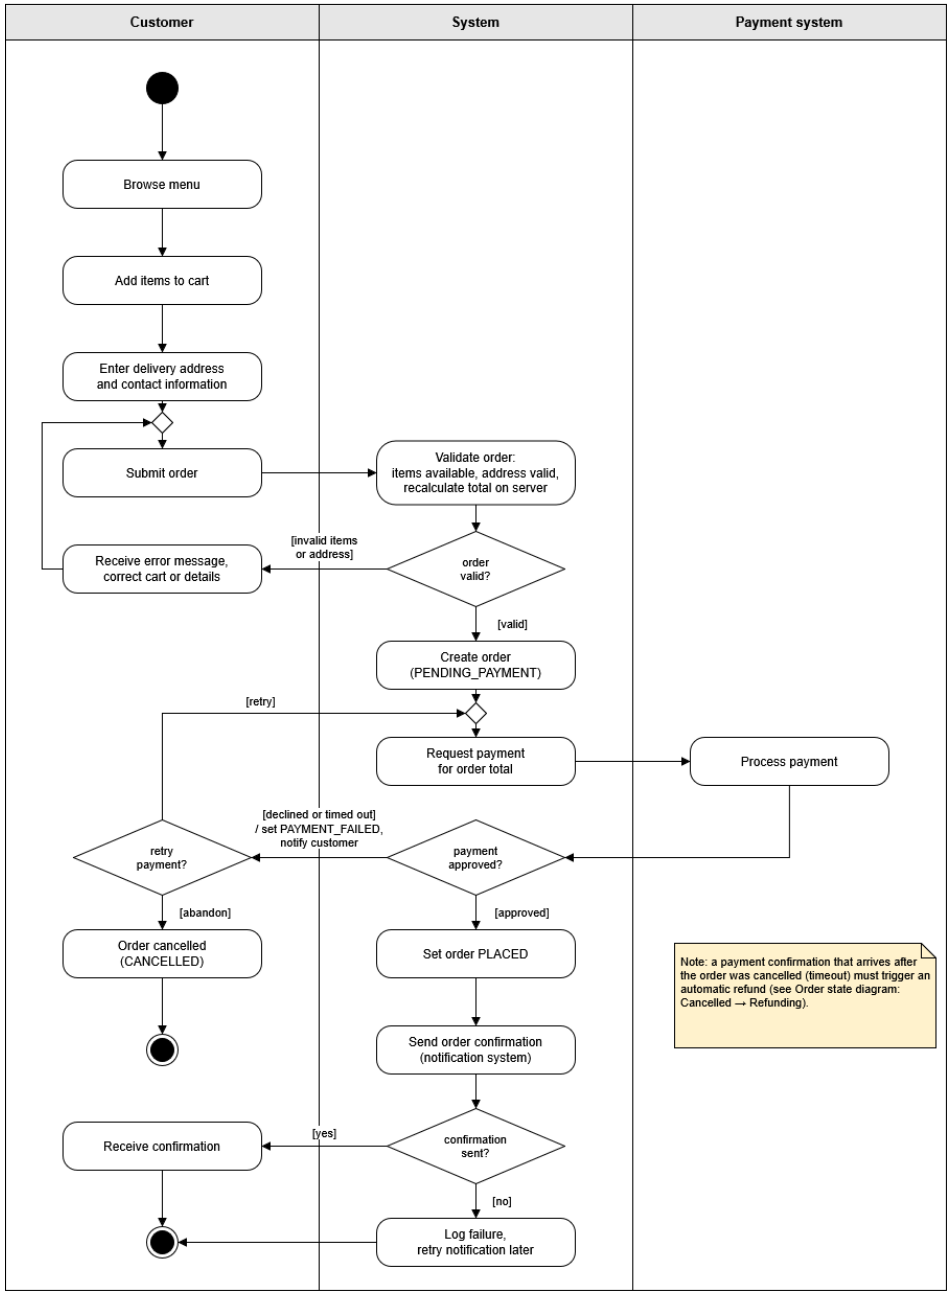

Non-Functional Requirements

- **Performance:** Monthly financial reports should be generated within 5 seconds for at least 95% of requests under normal operating conditions.
- **Security:** Financial reports must only be accessible to authorized users.
- **Accuracy:** Reported totals must be consistent with the financial records used to generate the report.
- **Reliability:** A temporary reporting failure must not modify stored financial records.

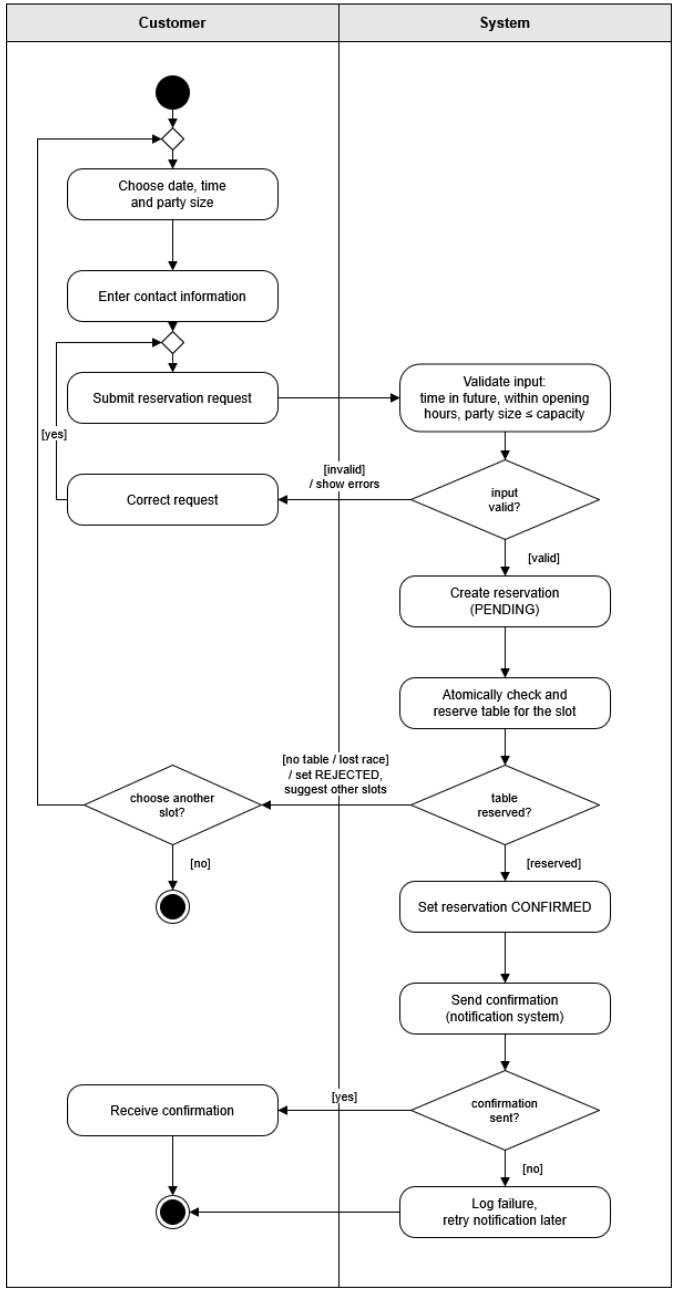

Notes and Edge Cases

- No transactions exist for the selected month.
- Financial data for the selected period is incomplete.
- Some expense categories have no recorded costs.
- A user without the required permissions attempts to access financial reports.
- The reporting service is temporarily unavailable.

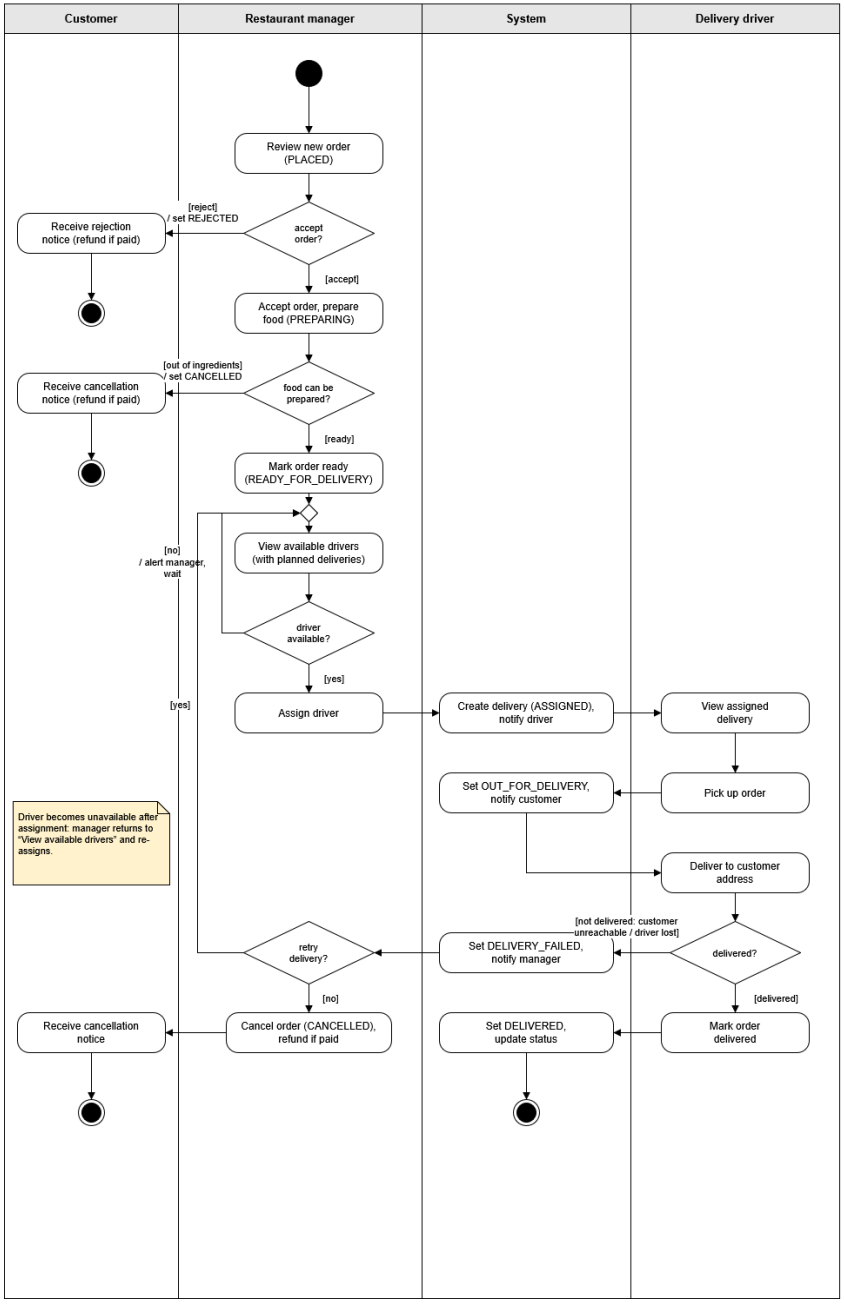

Activity 1 - Place and pay for a delivery order

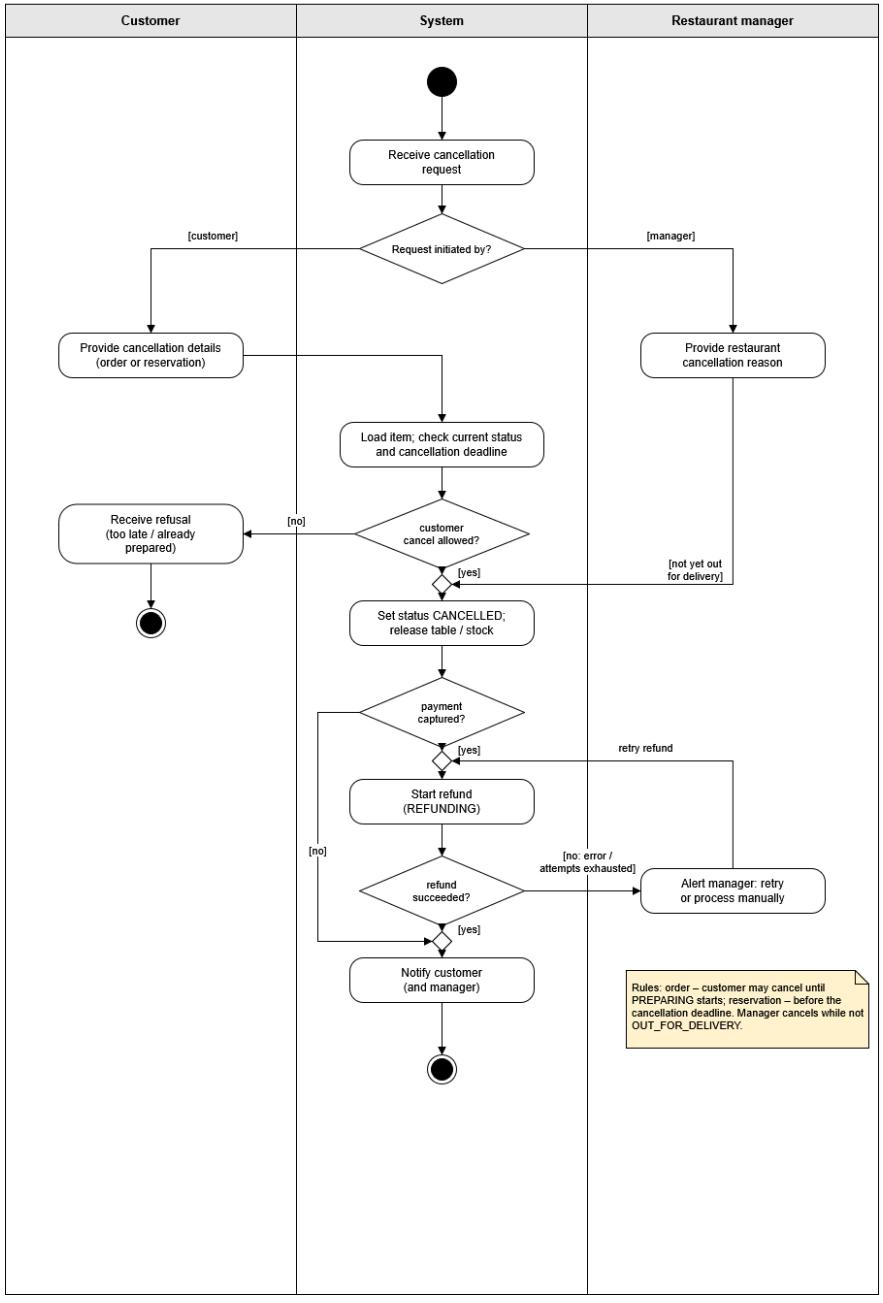

Activity 2 - Make a table reservation

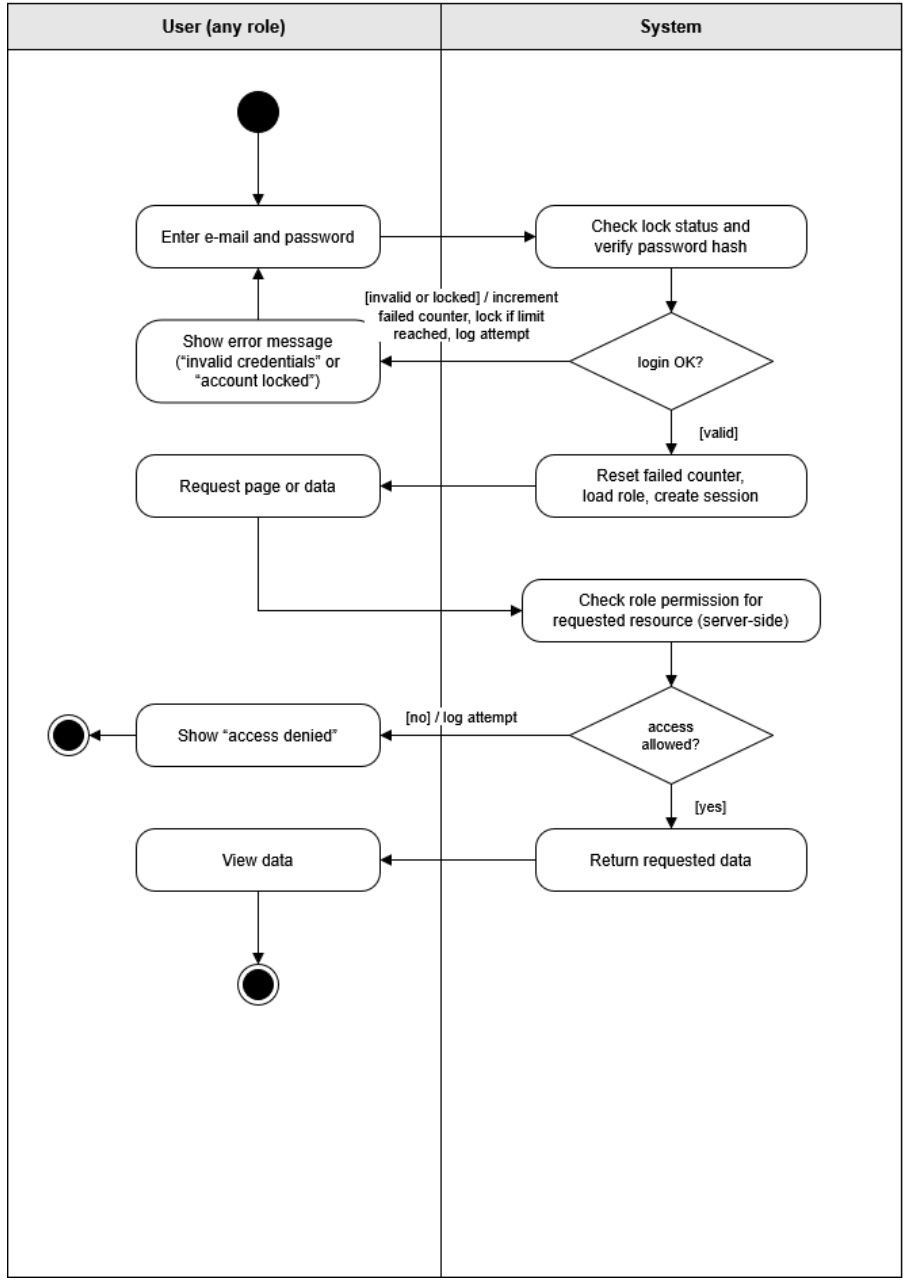

Activity 3 - Fulfil and deliver an order

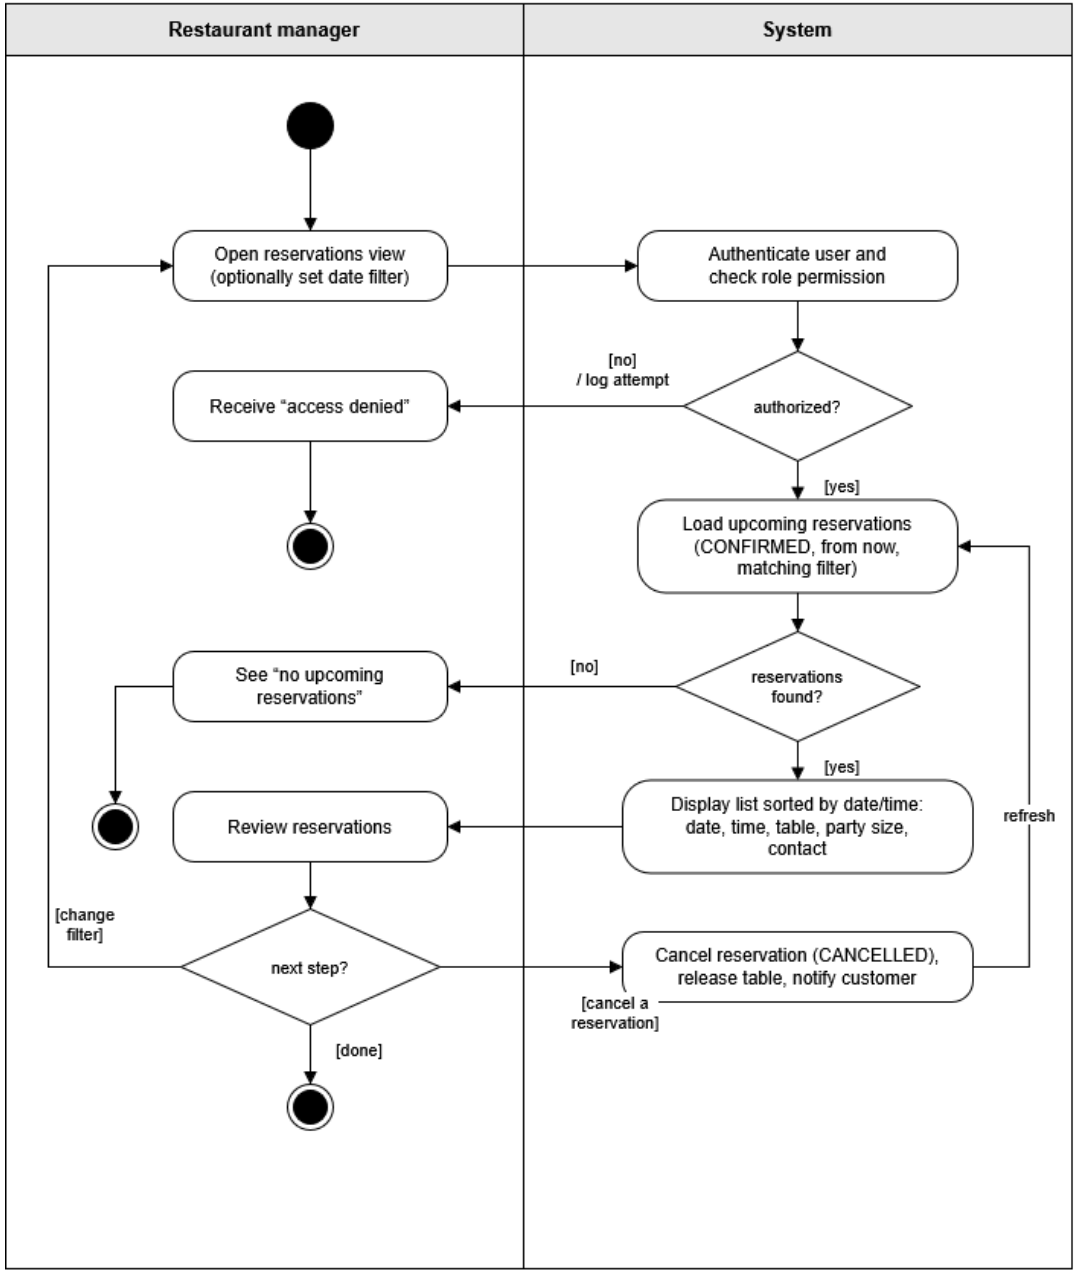

Activity 4 - Cancel an order or reservation

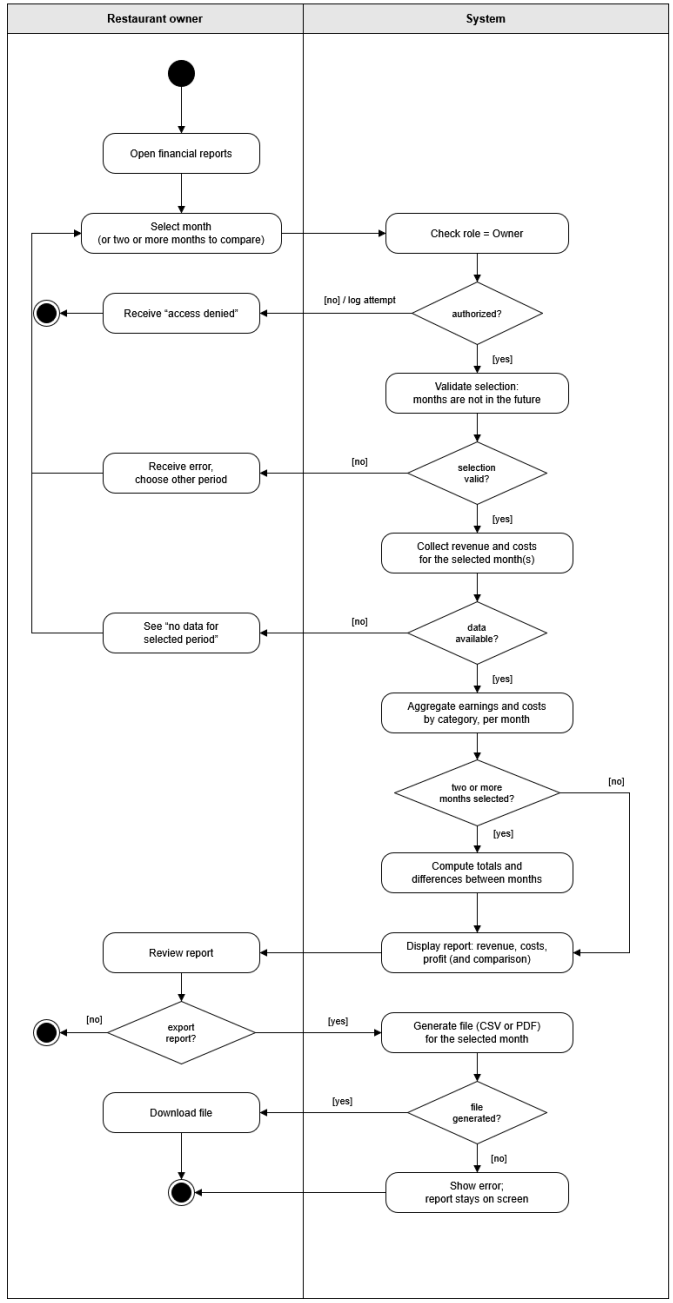

Activity 5 - Authenticate and authorize access

Activity 6 - Viewing reservations

Activity 7 - Viewing financial reports

Activity 8 - Managing permissions (assign role and enforce it)
